The HGC Arbitrage Fund LP Class "F" units returned +0.21% in October vs -6.27% for the TSX Total Return.

October was a month where we saw significant volatility return to what have otherwise been fairly calm equity markets. We were pleased with how the portfolio performed during the month, with the SPAC book holding relatively flat on an IRR basis as nominal spreads narrowed throughout the month. This combined with the closing of several announced transactions provided a nice base return for the Fund during this volatile period.

The Traditional Merger Arbitrage portfolio was generally quiet throughout the month with the Fund only holding a few small positions. Of note however, it appears we are beginning to see a repricing of risk across announced Merger Arb transactions with spreads becoming more reasonable given the associated hurdles to complete the transactions. As we have discussed throughout the past year, we have felt Traditional Merger Arbitrage transactions have as a whole been trading too tight given the risks associated with the asset class, and we witnessed this beginning to unwind during October. It remains to be seen if this trend will continue, but historically we have seen overall Merger Arb returns grow during times of volatility and shrink during times of complacency.

Regards,

Sean Kallir
